Cover: Two Young Girls at the Piano, by Pierre August RENOIR (© 1989
The Metropolitan Museum of Art; Robert Lehman Collection, 1975,
(1975.1.201)). Two Young Girls at the Piano is one of at least five
versions of the same scene by Renoir, including a lovely pastel recently
sold at auction. Renoir was 51 years of age at the time he did this work in
1892, and at the height of his popularity. This lovely presentation evokes
a former era when adolescents, at least those in favored economic status,
spent their leisure learning skills such as playing the piano and singing.
One of the major tasks of adolescence is to develop one's identity and
sense of competence. Whether it is the charming skills so beautifully
depicted in this painting or others, the task of pediatricians is to assist
young people in developing skills of which they can be proud.

The printing and production of
Pediatrics in Review is made possible,
in part, by an educational grant from
Ross Laboratories.
