CONTENTS

ARTICLES

- 291 **Mushroom Poisoning: Identification, Diagnosis, and Treatment**
Alan H. Hall, David G. Spoerke, and Barry H. Rumack
- 299 **Constipation in Children**
Joseph F. Fitzgerald
- 303 **Acute Ataxia**
David A. Stumpf
- 307 **Recurrent Headaches in Children: Diagnosis and Treatment**
Karen N. Olness and John T. MacDonald

ABSTRACT

- 312 Sickle Cell Anemia: Prenatal Diagnosis
- 312 Department of Corrections
- 313 Self-Evaluation
- 314 Cumulative Index

The Cover: Art covers have been well received by other medical journals, but *Pediatrics in Review*, by using only pictures of children, can provide a special focus for pediatricians interested in the art of children. The cover painting by George Catlin (1796-1872), *Strutting Pigeon* (1844), is in the National Museum of American Art (a gift of Mrs. Joseph Harrison, Jr), Smithsonian Institute, Washington, DC, and is reproduced with their permission. In this PREP year, 1986-1987, child development and behavior are key topics for review. The development of native American children was little noticed or recorded except by artists. Catlin had a real concern for survival of the customs and concern of American Indians. He wanted to show that American Indians had the same feelings of love and compassion for their children as other humans. The picture should remind us that all of the world's cultures have concern for the development of their children's full potential.

The printing and production of *Pediatrics in Review* is made possible, in part, by an educational grant from **Ross Laboratories.**

Answer Key: 1.D; 2.B; 3.E; 4.D; 5.E; 6.A; 7.B; 8.A; 9.E; 10.B; 11.E; 12.E.

gitis, encephalitis, cerebrovascular malfunctions, hydrocephalus, subdural hematomas, brain tumors, carbon monoxide poisoning, and hypertension. The majority of headaches are in the category of migraines or tension headaches. The etiology of juvenile migraines is still uncertain, and multiple treatment options with varying results reflect this uncertainty. A new treatment option includes training the child with migraines or tension headaches in relaxation and self-regulation of pain.

PREP and Continuing Education

During the 1987-88 curricular year (PREP 2-Year 3), we are planning to publish an article in *Pediatrics in Review* about some of the ways in which our subscribers use the Academy's PREP materials for their continuing education. We know from talking with many of you that these materials are often used in innovative and creative ways. They are used in residency programs and by pediatricians in practice for individualized education and as the basis for group learning activities.

We would like to hear from you so that we can pass some of *your* ideas on to your colleagues. Our goal in PREP is to provide pediatricians with a comprehensive and practical program of continuing medical education, to satisfy your needs for the most up-to-date knowledge in a format you will find useful. By providing this vehicle for sharing ideas and information, we hope we might make PREP an even more helpful and integral part of your continuing education.

Please address your ideas to:

New Videotape Adjunctive Material

The article, "Tic Disorders in Childhood," by Golden in the February issue of *Pediatrics in Review* will be supplemented with a videotape as part of Ross Laboratories adjunctive program. It will demonstrate common seizures and tic disorders by audiovisual means. We believe this new method of education will be exciting. Look for this tape to be distributed in May. (R.J.H.)
