The Cover: Art covers have been well received by other medical journals,  
but Pediatrics in Review, by using only pictures of children, can provide a  
special focus for pediatricians interested in the art of children. The cover  
painting by George Cattin (1796–1872), Strutting Pigeon (1844), is in the  
National Museum of American Art (a gift of Mrs. Joseph Harrison, Jr.,  
Smithsonian Institute, Washington, DC, and is reproduced with their permis-  
sion. In this PREP year, 1986–1987, child development and behavior are  
key topics for review. The development of native American children was  
little noticed or recorded except by artists. Cattin had a real concern for  
survival of the customs and concern of American Indians. He wanted to  
show that American Indians had the same feelings of love and compassion  
for their children as other humans. The picture should remind us that all of  
the world's cultures have concern for the development of their children's full  
potential.

The printing and production of Pediatrics in Review is made possible,  
in part, by an educational grant from Ross Laboratories.
